

Webstores & Client Portals

Launch branded company stores for your clients with budgets, departments, SSO, and approval workflows — in under 5 minutes.

What Is a Webstore?

A MergeTasks webstore is a fully branded, private e-commerce portal you create for a specific client. Their employees browse your curated product catalogue, place orders within their budget, and check out — all without contacting you directly.

01 Branded Experience

Custom URL, client logo, and colour scheme. Looks like a dedicated store built just for them.

02 Budget Controls

Set per-employee or per-department spending limits. Orders over budget require manager approval.

03 Department Structure

Organise employees into departments with different product catalogues and budgets for each.

04 SSO Login

Employees log in with their existing company credentials (Okta, Azure AD, Google Workspace). No new passwords.

BUILDING A WEBSTORE

The Store Wizard walks you through every step. Here's what to expect at each stage.

1 Store Details

Name the store, add a description, set the client company name, and choose a custom URL slug (e.g., acme-store.mergetasks.com).

2 Branding

Upload the client's logo and set their brand colours. The store header and checkout page update in real time.

3 Products

Select products from your catalogue to include in this store. Set store-specific pricing if needed.

Departments & Budgets

Departments let you organise a client's employees into groups — each with their own product catalogue and spending limit.

4 Departments

Create departments (e.g., Sales, Marketing, HR). Each department can have a different product selection and budget.

5 Budget Settings

Set annual, quarterly, or monthly budgets per employee or per department. Choose whether over-budget orders require approval or are blocked.

6 Approval Workflows

Configure who approves orders. Options: auto-approve within budget, manager approval always, or manager approval only over budget.

7 SSO Connection (Optional)

Connect an identity provider so employees log in with their work credentials. See the Integrations guide for setup details.

8 Launch

Publish the store and share the URL with your client. They distribute it to their employees directly.

NOTE

SSO is configured per webstore, not at the account level. Each store can have its own identity provider. SSO is only available for stores — it is not available for non-SSO stores or the main MergeTasks distributor login.

Managing an Active Store

Once a store is live, you manage it from the Webstores section of your MergeTasks dashboard. Here's what you can monitor and control.

FEATURE	WHAT YOU CAN DO
Orders	View all store orders in real time. Approve pending orders, add tracking, and manage fulfilment.
Employees	Add or remove employees, reset budgets, and move people between departments.
Products	Add or remove products, update pricing, and create featured collections.
Budget Reports	See spend by employee, department, and time period. Export to CSV.
Announcements	Post messages that appear on the store homepage — useful for new product launches or policy updates.
Store Settings	Update branding, URL, checkout settings, and notification preferences at any time.

THE CLIENT PORTAL EXPERIENCE

When your client visits their store URL, they see a clean, branded portal with your curated product catalogue. They can browse by category, add items to their cart, and check out — all within their assigned department budget. Order confirmations are sent automatically, and you see every order in real time on your MergeTasks dashboard.

TIP

Use the Announcements feature to keep your client's employees engaged. A monthly "New Arrivals" post drives repeat visits and increases order frequency.

Webstore Checklist

Use this checklist before launching a new store to ensure everything is configured correctly.

- ☐ Store name, URL slug, and client company name set
- ☐ Client logo uploaded and brand colours configured
- ☐ Products selected and store-specific pricing reviewed
- ☐ At least one department created
- ☐ Budget limits set (per employee or per department)
- ☐ Approval workflow configured
- ☐ SSO connected (if applicable)
- ☐ Test order placed and confirmed
- ☐ Store URL shared with client contact
- ☐ Stripe connected for checkout payments

NEED HELP?

Use the AI Copilot to get step-by-step guidance on any part of the store setup. It can also help you write the store description and product copy.
