

Integrations & Connections

Connect Stripe, QuickBooks, email providers, SSO identity providers, supplier databases, and the built-in AI Copilot.

Integrations Overview

MergeTasks connects to the tools your business already uses — from payment processors and accounting software to email providers, supplier databases, and identity providers. Every integration is designed to work out of the box with minimal configuration.

AVAILABLE INTEGRATIONS

CATEGORY	INTEGRATIONS
Payments	Stripe (card payments, deposits, invoicing)
Accounting	QuickBooks Online (invoices, expenses, reconciliation)
Email	Gmail, Microsoft Outlook / Office 365, Custom SMTP
SSO / Identity	Okta, Microsoft Azure AD, Google Workspace, Generic SAML
Suppliers	SAGE, ASI, S&S Activewear, SanMar, alphabroder
AI	Built-in AI Copilot (no external key required)

WHERE TO FIND INTEGRATIONS

All integrations are managed from the Integrations section in the main navigation. Each integration has a dedicated setup panel with step-by-step instructions and a connection test button.

Payments & Accounting

Stripe and QuickBooks are the two most impactful integrations for your day-to-day business. Both connect in under 5 minutes.

STRIPE — PAYMENT PROCESSING

Stripe powers all client-facing payments in MergeTasks — deposits on proposals, full payments on orders, and webstore checkouts.

1 Connect Your Stripe Account

Go to Integrations → Stripe and click "Connect with Stripe". You'll be redirected to Stripe to authorise the connection.

2 Configure Payment Settings

Set your default deposit percentage (e.g., 50%), choose which currencies to accept, and configure automatic receipt emails.

3 Enable on Proposals & Stores

Toggle "Require deposit" on individual proposals, or enable payments globally for all webstores in Store Settings → Checkout.

QUICKBOOKS ONLINE — ACCOUNTING

The QuickBooks integration automatically syncs invoices, payments, and expenses between MergeTasks and your QuickBooks account — eliminating double entry. Connect from Integrations → QuickBooks and map your revenue categories to your chart of accounts.

Email, SSO & AI Copilot

Connecting your email account allows MergeTasks to send proposals and communications from your own address. SSO lets your clients' employees log into webstores with their work credentials.

EMAIL INTEGRATION

PROVIDER	SETUP METHOD	NOTES
Gmail	OAuth 2.0 (one-click)	Requires Google account authorisation
Microsoft Outlook	OAuth 2.0 (one-click)	Works with personal and Office 365 accounts
Custom SMTP	Manual credentials	Enter host, port, username, and password

SSO PROVIDER SETUP

SSO is configured per webstore, not at the account level. Each store can have its own identity provider. The table below summarises the configuration values you'll need from your client's IT team.

PROVIDER	VALUES YOU NEED FROM IT
Okta	IdP SSO URL, IdP Issuer URI, X.509 Certificate
Azure AD	Login URL, Azure AD Identifier, Certificate (Base64)
Google Workspace	SSO URL, Entity ID, Certificate
Generic SAML	IdP Metadata XML or manual SSO URL + certificate

AI COPILOT

The MergeTasks AI Copilot is built in — no API key or external subscription required. It helps with product search, proposal writing, business insights, and client Q&A. The more you use MergeTasks, the more personalised its suggestions become.

Supplier Connections

Connecting your supplier accounts gives you real-time product data, pricing, and inventory directly in MergeTasks — no manual catalogue updates required.

SUPPLIER	CONNECTION TYPE	WHAT YOU GET
SAGE	API (credentials required)	Full product catalogue, real-time pricing, inventory
ASI	API (ASI membership required)	Full ASI supplier network, ESP product search
S&S Activewear	API (account required)	Apparel catalogue, sizing, real-time stock
SanMar	API (account required)	Apparel and accessories, warehouse availability
alphabroder	API (account required)	Apparel, headwear, bags, real-time pricing

CONNECTING A SUPPLIER

1 Go to Integrations → Suppliers

Find your supplier in the list and click "Connect".

2 Enter Your Credentials

Enter your supplier account username, password, or API key as prompted. These are your existing supplier login credentials.

3 Run the Connection Test

Click "Test Connection" to verify the credentials are correct. A green checkmark confirms the connection is live.

DON'T HAVE A SUPPLIER ACCOUNT?

Contact the supplier directly to set up a distributor account. Most approvals take 1–3 business days. Once approved, you'll receive API credentials to enter in MergeTasks.
