

Proposals, Orders & Proofing

Create professional proposals, collect digital approvals, manage purchase orders, and deliver virtual proofs — all in one place.

Proposals Overview

MergeTasks proposals are fully branded, interactive documents your clients can review and approve digitally. No PDFs, no back-and-forth emails.

CREATING A PROPOSAL

1 Select a Client

Choose an existing client or create a new one. The proposal will be linked to their account and visible in their client portal.

2 Add Products

Search your catalogue or use the AI Copilot to find products. Add quantities, colours, and decoration details for each line item.

3 Set Pricing & Terms

Apply your margin, set a deposit requirement, and add payment terms. Pricing updates in real time as you make changes.

4 Send for Approval

Send the proposal directly to your client's email. They receive a branded link — no login required — where they can review, comment, and approve.

PRO TIP

Use the AI Copilot to generate proposal copy and product descriptions from a brief. It can draft a full proposal in under 2 minutes from a few bullet points.

Orders & Purchase Orders

Once a proposal is approved, converting it to a purchase order takes one click.

MergeTasks handles the supplier communication automatically.

ORDER WORKFLOW

STAGE	WHAT HAPPENS
Proposal Approved	Client digitally signs. Deposit collected via Stripe if required.
Convert to Order	One-click conversion. PO number assigned automatically.
Supplier Submission	PO sent to supplier via EDI, email, or API depending on integration.
Production Tracking	In-production status updates pulled from supplier where available.
Shipping & Delivery	Tracking numbers logged. Client notified automatically.
Invoice	Final invoice generated and sent. Synced to QuickBooks if connected.

VIRTUAL PROOFING

MergeTasks includes a built-in virtual proofing tool. Upload your client's logo and apply it to product mockups directly in the platform. Proofs are attached to the proposal and visible to the client in their approval portal.

1 Upload Artwork

Upload the client's logo or artwork file (PNG, SVG, or PDF). MergeTasks stores it against the client record for reuse.

2 Apply to Product

Select a product in the proposal, open the proofing tool, and position the artwork on the product template.

3 Client Reviews & Approves

The proof is embedded in the proposal. The client can approve the proof directly from their approval link.

Deposits & Payments

MergeTasks integrates with Stripe to collect deposits and final payments directly from clients — no separate invoicing tool required.

HOW PAYMENTS WORK

01 Deposit on Approval

Set a deposit percentage on any proposal. The client pays via Stripe when they approve — no separate invoice needed.

02 Final Invoice

Generate and send the final invoice from the order page. The client pays the balance via the same Stripe link.

03 Automatic Receipts

Stripe sends branded receipts automatically. All payment records are visible in the order timeline.

04 QuickBooks Sync

If QuickBooks is connected, invoices and payments sync automatically — no double entry.

STRIPE REQUIRED

Collecting payments requires a connected Stripe account. Go to Integrations → Stripe to connect. It takes about 2 minutes and uses your existing Stripe account or creates a new one.

Proposal Status Reference

Every proposal moves through a defined status lifecycle. Here's what each status means and what action is required.

STATUS	MEANING	NEXT ACTION
Draft	Being built, not yet sent to client	Complete and send
Sent	Client has received the proposal link	Follow up if no response in 48h
Viewed	Client has opened the proposal	No action needed — monitor
Approved	Client has digitally signed	Collect deposit, convert to order
Declined	Client has declined the proposal	Follow up to understand objections
Expired	Proposal validity date has passed	Reissue with updated pricing
Converted	Converted to a purchase order	Manage from Orders section

TIP

Set a validity date on every proposal (e.g., 30 days). This creates urgency and protects you from pricing changes on supplier side. Expired proposals can be reissued with one click.
